

Senior SAP Analytics & Transformation Consultant

Portugal | EU Citizen | mail@ricardorusso.com | linkedin.com/in/ricardorusso

I bring structure, control and business alignment to complex analytics environments.

Deep SAP Analytics experience combined with platform and application ownership, technical business analysis, operational resilience, programme governance, mentoring and transformation value assessment.

18+ years

international SAP Analytics

Business principle

Technology only creates value when people trust it, can find what matters and actually use it.

Transformation principle

Modernisation is not the outcome. Business consequence is.

Transformation must create enough business value to justify its financial cost, operational disruption and long-term complexity.

What I bring

- **Platform & application ownership** - Roadmaps, releases, security, service levels, production stability and lifecycle decisions.
- **Technical business analysis and KPI/data logic** - Source-to-target and field mapping, transformation rules, reconciliation and trusted business semantics.
- **Operational resilience, incidents and SAP Support** - Root-cause coordination, incident/problem management, case escalation, service continuity and controlled recovery.
- **Programme, supplier and executive governance** - Multi-workstream delivery, dependencies, risks, supplier coordination, steering and decision transparency.
- **Mentoring and knowledge transfer** - Onboarding, team development, standards, cross-region enablement and practical knowledge sharing.
- **Lifecycle, adoption and maintainability** - Content housekeeping, migration readiness, release control, user adoption and platforms that remain useful over time.

Supporting foundation: SAP BPC and SAP BW Integrated Planning (BI-IP), including budgeting, profitability and performance-management contexts.

Selected career progression

Technical delivery / application ownership / programme governance / international leadership & mentoring / rollout leadership / global platform governance / broader analytics transformation
